

## River Torrens Linear Park Management Plan

EBS was chosen to be the lead consultant in the development of a detailed management plan for a specific section of the River Torrens Linear Park (Port Road Bridge to the Henley Beach South outlet (approximately 11km). The project site passed through two local council areas - The City of West Torrens and The City of Charles Sturt.

The management plan assessed the existing condition of Linear Park in line with biodiversity, infrastructure, water quality and planning. The plan identified a planning framework and character precincts as well as a series of recommended actions to improve and enhance the unique features of the River Torrens Linear Park.

As part of the project, EBS undertook an extensive vegetation survey and fauna assessment. Significant trees were surveyed and areas with visible erosion recorded. EBS also undertook extensive consultation on the project with key stakeholders, adjoining landholders and the general community. Consultation was undertaken through workshops, one on one meetings, poster presentations and questionnaires. EBS developed the recommended actions associated with the biodiversity and back stability areas and was responsible for drawing the various areas together into a final report.
